

Euglena P-3

Naturally All-In-One Superfood that Brings Out Your Beauty From Within

Provides 60 Essential Nutrients

- Euglena is a species of green microalgae that grows in fresh and marine water.
- It has chlorophyll which allows it to carry out photosynthesis to make nutrients.
- It is the only species of microalgae whose cells have a cell membrane instead of a cell wall which allows full digestion (up to 93.1%) and absorption of nutrients.¹
- It is naturally rich in carotenoids and all essential vitamins and minerals.
- It also has the essential, anti-inflammatory omega fatty acids and a complete profile of amino acids, making it perfect supplement for vegans or vegetarians.
- Euglena P-3 is added with a probiotic Bifidobacterium breve B-3, making it a product that provides 60 essential nutrients. This probiotic works hand-in-hand with Euglena.

Chlorophyll - The Toxin Remover

- Aging cells gradually lose their ability to repair DNA from constant assaults like free radicals, environmental toxins, radiation.²
- The magic of green chlorophyll or chlorophyllin helps to protect our DNA from the numerous threats.³
- Chlorophyllin is the bioactive compound found in chlorophyll that protects against cell-damaging free radicals.⁴
- It also binds and forms irreversible complexes with toxins, especially the environmental toxins and those produced through food preparation methods, allowing the body to safely eliminate them.⁴
- Chlorophyllin activates enzymes in the liver that help to detoxify and remove harmful substances from the body.⁴
- Chlorophyllin has been shown to help prevent genetic damage caused by radiation.⁴

Paramylon - The Secret Beauty Weapon

- Paramylon is a bioactive ingredient found only in Euglena.
- It is a dietary fiber belonging to the Beta-glucan class of compound with a sponge-like molecular structure that helps to remove toxins and undesirable substances like fats, cholesterol, purines, etc. from our body, and to moderate insulin response.^{5,6}
- Studies have shown that consumption of Euglena may prevent the formation of wrinkles and decline of skin firmness caused by UV rays.⁷
- It has shown to inhibit the development of atopic-dermatitis-like symptoms too.⁷
- Euglena helps to promote regular bowel movement.
- Together with the anti-inflammatory omega-3s fatty acids in Euglena, paramylon downregulates inflammations in the body, which makes Euglena a suitable solution to manage acne caused by inflammation.⁷

The Beauty Bifidobacterium breve B-3 in Euglena P-3

Euglena has been found to work synergistically with probiotics – the good bacteria in the intestine. Thus, a probiotic Bifidobacterium breve B-3 has been added in Euglena P-3.

Besides improving immune system and easing inflammation through its possible effects in modulating intestinal mucosal immunity that leads to preservation of skin homeostasis,^{8,9} this strain of probiotics may help to enhance skin health by:

- Protecting collagen & laminin (structural components of the skin)¹⁰
- Preventing skin wrinkling & barrier dysfunction¹⁰
- Modulating chronic UV-induced inflammatory responses and reduction in skin hydration¹⁰

Naturally all-in-one Euglena P-3 is produced with Euglena cultivated in the famous pristine and natural environment of Ishigaki island in Okinawa, Japan. With Euglena P-3, you will be able to obtain 60 essential nutrients needed for optimal health.
